

Creating Development Environments with Vagrant - Second Edition

Leverage the power of Vagrant to create and manage virtual development environments with Puppet, Chef, and VirtualBox

About This Book

Get your projects up and running quickly and effortlessly by simulating complicated environments that can be easily shared with colleagues

Provision virtual machines using Puppet, Ansible, and Chef

A practical, hands-on guide that helps you learn how to create powerful and flexible virtual development environments

Who This Book Is For

If you are a developer who wants to have your development environment accurately reflect your live servers to tackle the ever-increasing complexity of web and software projects, this book is most certainly intended for you!

Its assumed that you know the basics of Linux systems in the context of web-based projects.

What You Will Learn

Integrate your own machine with the virtual machine of your development environment

Install Vagrant on multiple platforms such as Windows, OS X, and Linux

Familiarize yourself with Vagrant operations such as port forwarding, disk mapping, and networking

Install and manage software packages using Puppet, Ansible, and Chef

Set up and control multiple virtual machines simultaneously within the same project

Build and manage your own base box for Vagrant

Discover how to set up a simple LEMP server for a Vagrant project

In Detail

Vagrant is an open source software used to create and manage virtual development environments. It can be considered a wrapper around virtualization software such as VirtualBox and configuration management software such as Chef, Ansible, and Puppet. This book looks at the potential that virtualization offers us, and breaks down the process of creating a distributable and powerful virtual development environment. You will learn how to create more advanced development environments consisting of

multiple virtual machines, allowing you to mimic multi-server production environments. Finally, you'll gain an insight into Vagrant Cloud, which is a suite of web services built into Vagrant that allows you to remotely view applications on a Vagrant instance.
